

When reviewing this boat, please note a few things:

- Folbot produces folding kayaks. Thus, Folbots should be differentiated from rigid kayaks.
- Because they are collapsible, Folbots give kayakers the ability to travel with their boat using modes of transportation that are unable to transport rigid kayaks (airplanes, subways, trains, etc.).
- Folbots are ideal for those with limited storage space, e.g., apartment or condo dwellers. Folbots are also able to be securely transported or stored in a car trunk, also eliminating the need for a roof rack.
- A Folbot is intended for flat water paddling. We strongly recommend against using it in rocky conditions or surf over two feet (swells are fine).

Thank you for taking the time to review our boat. We hope you enjoy paddling a Folbot!
